Projects

ScamShield AI (React, HTML, CSS, Django, Python, NLP) :

It is a web-based system that detects scams in messages, URLs, images, and voice. It analyzes different types of content and provides real-time risk scores to identify threats. The platform is simple and easy to use for better online safety

AI Resume-Based Interview Call Assistant | Automation Project (n8n, Vapi, Generative AI, Google Sheets API) :

This project automates candidate screening by analyzing resumes and generating interview questions. It manages the complete process from form submission to interview calls. It helps reduce manual effort and speeds up the hiring process.
